Title: Morphological approach for the pre-printed information extraction  
of Brazilian bank checks

Abstract: This article presents a morphological approach for the  
pre-printed information extraction of the Brazilian bank checks not  
filled. The main goal of this work is to show the robustness of the  
proposed method as shown by the great amount of existent bank checks,  
and also that complex forms like brazilian bank checks can be  
segmented without previous knowledge of the background.

**Title:** Hidden Markov model based word recognition and its application to legal amount reading on French checks

...Abstract: Markov model (HMM) based word recognition algorithm for the recognition of legal amounts from French bank checks is presented. This algorithm is part of the A2iA INTERCHEQUE recognition system. The algorithm starts from images of handwritten words which have been automatically segmented from binary check images. After finding the lower-case zone on the complete amount, words are slant corrected...

...importance evaluated. Results have been obtained on large real-life data bases of French handwritten checks. The HMM-based system has been shown to outperform a holistic word recognizer and another...

... of about 89% for the 26-word vocabulary relevant for legal amount recognition on French bank checks have been obtained. More recently, a Neural Network-HMM hybrid has been designed, which produces...

FOUR ESSAYS ON DEPOSIT INSURANCE, BANK BRANCHING, AND BANK PERFORMANCE  
(PROFITABILITY)

Descriptors: ECONOMICS, THEORY ; BUSINESS ADMINISTRATION, BANKING

while bank failures were common in the United States, this is not true of other industrialized nations...

...links between two distinctly American institutions; deposit insurance and branching restrictions and their impact on bank failures and profitability. This work finds that limiting branching augments bank profitability at the cost of reducing a bank's level of diversification. Deposit insurance, while eliminating failures caused by bank runs, increases the risk profile of banks which, *ceteris paribus*, generates a higher incidence of failures.

The first chapter of this dissertation outlines American experience with bank branching and deposit insurance. It is argued that the lack of diversification caused by the inability of banks to branch contributed to the bank failures of the Great Depression, which led to the introduction of national deposit insurance. Chapter II presents a general equilibrium model of bank borrowing and lending. In this model, the introduction of deposit insurance causes a reduction in bank capital and increases bank participation in risky ventures. Both results point to an greater likelihood of bank failure in the presence of insurance.

Chapter III employs an alternate approach exploring the relationship between bank profitability, deposit insurance, and bank branching. Using a model of monopolistic competition, branching restrictions are hypothesized to both limit competition between banks and the diversification of their loan portfolios. In this model, the effect of increased competition outweighs better bank diversification leading to reduced profitability.

The empirical chapters of this dissertation measures bank performance with respect to branching and insurance. Using a panel model of profits aggregated at the state level, Chapter IV discovers that bank profitability increases with tighter restrictions on branching. Chapter V finds that bank failures decrease as banks are allowed to branch and increase as insurance levels rise. Both findings are robust for...

...measures of branching, profitability, and across time periods.

Finally, I note that Chapter II, "Deposit Insurance and Resource Allocation," derives from work co-authored with Professor Jo Anna Gray of the University of...

THE IMPACT OF BANK STRUCTURE ON SMALL BUSINESS AND SMALL FARM LENDING

Author: HARDEE, PAULINE THYRA

THE IMPACT OF BANK STRUCTURE ON SMALL BUSINESS AND SMALL FARM LENDING  
Descriptors: BUSINESS ADMINISTRATION, BANKING ; ECONOMICS, FINANCE ;  
ECONOMICS, AGRICULTURAL

Motivated by consolidations in the banking industry, this study examines the impact of bank structure on lending to small businesses and small farms. Past research reveals that small banks play a central role in financing small firms and small agricultural borrowers, and that the trend within the larger, consolidated banking organizations is away from these bank dependent borrowers. Hence, as smaller banks are absorbed into larger, more complex banking structures, credit availability to small businesses and small farms may be curtailed. This research explores the impact of the Texas bank structure in light of this problem. It expands the literature by developing a formal conceptual analysis regarding the relationship between bank organizational portfolio risk and bank deposits invested in bank dependent loans.

The information hypothesis of this study is that smaller, more simple banking organizations are better able to mitigate private information asymmetries inherent in bank dependent lending, therefore devote more deposits to these types of loans. The analysis employs new data on small business and farm loans from the bank call report files in an OLS reduced form specification. The bank dependent loan to deposit ratios categorized by small business loans and small farm loans are...

...in this type of lending. Differences across regressions are also examined to isolate variations across bank structures in information asymmetries between deposits devoted to bank dependent loans versus their large loan counterpart. In part, this additionally serves as a control...

...asset allocation decision between these two loan types and all other assets. Additionally, variations across bank structures in information asymmetries are also isolated by examining differences between the allocation of deposits in bank dependent loans between the more information sensitive non real estate loans and those secured by real estate.

Overall, the research results indicate that not only small banks , but in-state holding company and low to moderately branched bank structures devote more of their deposits to small business and small farm lending. In this...

...niche in these type of loans. This niche appears to arise from the less complicated banking structures' capacity to mitigate acute informational asymmetries inherent in bank dependent lending through more effective production and use of private information. As this research suggests, if these simpler, smaller banking structures continue to exist, it will be because they fill a niche in the market for bank dependent loanable funds.

**ESSAYS ON BANKING THEORY AND POLICY IMPLICATIONS (LIQUIDITY SHOCKS, INTERBANK MARKET)**

Descriptors: BUSINESS ADMINISTRATION, BANKING ; ECONOMICS, FINANCE;  
ECONOMICS, THEORY

...thesis consists of three separate but related essays, examining the economic roles of depository institutions ( banks ).

The first essay (Chapter 2) integrates Diamond and Dybvig's (1983) banking model with Samuelson's (1958) consumption-loan model. A bank functions as a social compact to facilitate intergenerational transfers. As a result, even though Diamond and Dybvig's assumption that agents invest only in the bank is dropped, the bank still achieves interest rate smoothing and provides depositors with insurance against private preference shocks. The bank allocation is not a competitive equilibrium of simple decentralized exchange, with or without money. The bank is subject to runs. These runs can result from excessive withdrawals; they may also be...

...in Diamond and Dybvig's one-generation model. Consequently, suspension of convertibility may not prevent bank runs. Deposit insurance or a commitment to government intervention is arguably the only way to maintain bank stability.

The second essay (Chapter 3) models a productive economy with individual and aggregate liquidity...

...uninformed agents. The under-investment problem is mitigated by forming a financial intermediary resembling a bank which designs two types of financial claims: demand deposits and bank stock. Uninformed agents choose to hold the informationally less sensitive demand deposits, while informed agents invest in the bank's stock. Even though the payoffs to the demand deposits are not contingent on the aggregate liquidity demands, the bank can still achieve allocations that are Pareto-superior to that of the market.

The third...

...4) attempts to explain the emergence of the two-tier structure of the U.S. banking system and the stylized facts of the U.S. interbank market. In a market with a large number of ex ante identical banks each facing

uncertainty in deposit withdrawals and loan demands, even if resolution of the uncertainty...

...interbank liquidity sharing. If, however, interbank borrowing incurs costs such as monitoring or transaction costs, banks increase their liquidity reserves and as a result, the banking system accumulates excess reserves in the sense that the aggregate amount of liquidity reserves exceeds the amount that is needed to meet the aggregate deposit withdrawals and loan demands. Money center banks are endogenized to utilize the excess reserves for the investment in the more productive but less liquid assets, functioning essentially as a banks' bank. The two-tier banking system is vulnerable to contagious banking panics.

#### **SOME MACROECONOMIC CONSEQUENCES OF BANKING SYSTEM REGULATION**

This thesis argues that some of the regulations to which the banking system is subject have significant and subtle macroeconomic effects. Specifically, we show that banking regulation could lead to the development of large new markets and could change the pattern...

...first chapter considers the \$1.4 trillion market for interest rate swaps in which the banks have been active participants. We argue that the large pool of short-term deposit liabilities of the banks and the capital requirements they must satisfy make the interest rate swap an ideal risk...  
...would explain then, the large size of the swap market and the dominance of the banks in it.

The second chapter compares the industrial evolution of west Germany and Japan in the 1950-1970 period. The banking systems in both countries were dominant sources of financing during this time and, as such...

...the surprisingly different patterns of industrial organization observed in these countries resulted from differences in banking regulations and practices and from differences in historical conditions.

The third chapter takes up the mounting problems faced by the U.S. banking system since the late 1970s. We evaluate the various reform measures that have been proposed...

...using a simple equilibrium model. Our model recognizes that the highly leveraged position of the banking system could lead to moral hazard in lending which, in turn, would encourage the firms in the economy to take up riskier projects. Thus, changes in banking system regulations that alter the banks' lending incentives, would affect the types of assets produced in the economy. Our evaluation of...

#### **SIMULATING COMMERCIAL BANK PERFORMANCE UNDER DIFFERING LOAN-DEPOSIT RELATIONSHIPS**

Descriptors: ECONOMICS, FINANCE; BUSINESS ADMINISTRATION, BANKING

Agricultural bank failure rates in the 1980s have been at post-depression highs. Concern has arisen among agricultural economists over the impact of bank failure on availability of credit services and community health. Texas has ranked at the top...

...this study was to assess the impact that changes in the operating environment of agricultural banks have upon bank performance and survival. To accomplish this objective, a simulation model of the representative agricultural bank was constructed and then tested for responsiveness to differing risk attitudes of bankers, level and allocation of loan-to-deposit feedback and noninterest operating cost level.

Model results illustrate decreasing profitability and increasing relative liquidity for risk averse bankers. Further, loan-to-deposit feedback is shown to significantly impact bank performance with increased feedback rates reducing bank funds costs. Finally, a reduction in bank noninterest operating costs directly increased bank profitability as expected.

...and thus affect real investment activity. Essay One presents a  
theoretical, equilibrium model of regional banking markets which uses  
plausible information asymmetries to explain how regional bank capital  
may affect regional investments. We consider how local investments may be  
affected by variations in regional deposit-capital ratios (when the  
aggregate deposit -capital ratio would fund the optimal allocation). A  
key assumption is that a bank 's monitoring technology is immobile across  
regions. The main conclusion is that capital-requirements and the  
immobility of bank monitoring technology imply that the mix of regional  
bank capital and collateral affect the efficiency of local investment  
activity.

The second essay examines the implications of bank portfolio risks  
for real investment allocations. We present a theoretical model in which  
banks fund long-term, risky, loans with short-term deposits paying money  
market yields. Bank portfolio risks are motivated by information  
asymmetries; bank capital must cover possible portfolio losses due to  
both loan default and high possible future deposit costs. One conclusion is  
that interest-rate risk increases the minimum quantity of bank capital  
required for investment in the optimal, albeit riskiest, portfolio. A  
second conclusion is that the efficiency of a bank 's intermediation  
technology will affect its choice of second-best portfolio. Efficient

banks will opt for investing in safer bank loans rather than money market assets because the return from using their technology is sufficient ...

TEMPORARY EQUILIBRIUM IN A PRIVATE BANKING ECONOMY WITH CREDIT RATIONING

Grandmont and Laroque (1975) introduced a central bank into the temporary equilibrium framework. Their paper avoided the problem of agents borrowing and planning bankruptcy by introducing a planned solvency assumption on borrower behavior. A central bank, which monopolizes the issue of money and accepts no deposits, has no obvious reason to be concerned with borrower defaults since there is never a threat to bank solvency. In contrast, a private bank must be concerned with borrower defaults since bank loans are financed through the issuance of liquid, less risky deposits. A high level of borrower defaults can result in bank insolvency due to insufficient income to pay depositors. The continued attractiveness of deposits and an accounting system of exchange requires that private banks minimize the likelihood of bank insolvency. In the presence of incomplete information on borrower riskiness, banks can accomplish this through credit rationing.

This paper introduces private banks which can create money through the provision of checking deposits into the temporary equilibrium model. Private banks pool deposits to make loans and to provide depositors with the services of an accounting system of...

...the money stock is determined endogenously along with prices. Without the planned solvency assumption, a bankruptcy law and institutionally imposed credit limits ensure bank solvency and rule out unbounded credit positions so that there exists a temporary equilibrium with...

(Article on Fleetwood Enterprises Inc, major producer of mobile homes.  
Company professes confidence that mobile homes, which cost less than \$30,000 on average, will eventually win larger share of new housing market and that showcase developments, such as ones Fleetwood has planned in Calif and Fla, will help put mobile homes on par with conventional homes. Company's recreational vehicle business, which accounted for 2/3 of its sales in '78, has dropped nearly 60% because of gasoline shortages. Industry recently has drawn support of kind that will give mobile homes wider parity with conventional homes. Savings and loan associations have received authority to create 20-year, 10%-down-payment mortgages for mobile homes on individual lots and to allocate more of their deposits to such lending. FHA is committed to help finance 50,000 mobile homes in next year and some banks have begun to offer combination loans for home and site. Fleetwood Enterprises Inc president William W Weide and vice president Gerald G Biddulph comment. Market performance chart. Weide and Biddulph illus. Graphs show company's sales, US recreational vehicle shipments and US mobile home shipments from '70 to '79 (L).)

51 business groups subject to tight bank credit control

SOUTH KOREA: TIGHT CREDIT CONTROL ON BUSINESSES

The Korea Herald (XBF) 05 July 1996 P.8

Language: ENGLISH

51 business groups subject to tight bank credit control

According to the meeting at the Monetary Board of Bank of Korea, any business group owning banks won 250 bn or above in aggregate bank payment and loan guarantees are subjected to credit control of the revised main bank system. The new main bank system helps in improving the financial soundness of loans by local banks to business subsidiaries and groups. This is to help step up the major role of primary banks in restricting the credit control towards big groups or companies, to prevent bad loans. This...

FINLAND: BANKS ' LOAN PORTFOLIO DECLINES

The amount of loans granted by Finnish banks continued to decline in October 1994. According to the Central Statistical Office, it amounted to ...

...from the end of 1993 and FMk 113.1bn from the high of 1991. The aggregate loan portfolio of deposit banks amounted to FMk 315.7bn at the end of October, compared to FMk 339.7bn...

Sberbank prodolzhaet rabotat po printsipu  
RUSSIA: MARKET SHARE OF SBERBANK DECLINING  
Segodnya (ESK) 11 Oct 1994 p. 12  
Language: RUSSIAN

Russian prime minister Viktor Chernomyrdin recently announced that the aggregate deposits of private persons in commercial banks amounted to some RUR 16,000bn (USD 5.33bn) at the beginning of September. Some 50% of

the total has been deposited in Sberbank, Russian savings bank . In May, Sberbank accounted for 71% of total deposits. The popularity of the bank has suffered due to for example the fact that Sberbank cut the interest rates on all accounts (excluding time deposits ) on 1 October, due to the cut in the discount rate. Sberbank is likely to...

... unless it is willing to pay an interest rate as big as the other commercial banks .

Net profit of banks declines by 24.4 pc

INDIA: PERFORMANCE OF PRIVATE SECTOR **BANKS**  
Financial Express (XAG) 19 Mar 1994 p.15  
Language: ENGLISH

Net profit of **banks** declines by 24.4 pc  
INDIA: PERFORMANCE OF PRIVATE SECTOR **BANKS**

According to a recent publication of the Indian **Banks ' Association (IBA)**, the private sector **banks** recorded a net profit of RS 601.6 mn in 1992-93 compared to RS 809.6 mn in 1991-92. Nine **banks** reported a positive growth in net profits while two **banks** showed a loss of RS 168.8 mn. During 1992-93, the income of private sector **banks** showed a growth of 23% whereas expenditure was higher by 26%. Aggregate deposits increased by 26% and equity rose by 42%. Reserves of the **banks** as a group increased by 50% whereas borrowings grew by 47%. Investment was increased by...

FINLAND: PROFESSOR ON **BANKING CRISIS**  
Turun Sanomat (XFG) 15 Mar 1994 p. 3,10  
Language: FINNISH

FINLAND: PROFESSOR ON **BANKING CRISIS**

... that nothing has been done in Finland to limit the tax-payers responsibility in the **banking crisis**. Professor Huhtamaki says that the **banking** system could be restructured so that the risk would shift from the tax-payers to the **banks** themselves. He suggests that **banking** be split into deposit activities and corporate finance. A **bank** could only be involved in one of the two. KOP's Chairman Pertti Voutilainen is not enthusiastic about the proposal. "I don't see how this could have facilitated the **banking** crisis or how it could help in possible future crises". He says that in principle ordinary deposits and risk activities can be separated within the same **bank** .

Wall Street Journal Europe (WSJ) 10 June 1992 p20

Swiss Regional Banks Also Threatened, Moody's Says  
SWITZERLAND - REGIONAL BANKING INSTITUTIONS THREATENED

Switzerland: Problems now being faced by the country's leading commercial banks also pose a threat to its 189-strong network of regional banks, according to Moody's Investors Service. The threat comes in the form of a declining retail deposit pool, an ailing commercial real-estate market and the recent abolition of banking cartels. Moody's points out that the regional banks are lacking in strengths such as an in-depth product diversity which is of use to major banks during times of harsher competition. Regional banks showing the best prospects for the long term are those which have adopted a conservative...

By STEPHEN KLEEGER

TEXT:  
...banks might dominate fringe players in a given metropolitan region.  
\*Its request that merging banks reallocate commercial deposit accounts to branches by customer ZIP code is cause for worry, Mr. Neill argues, in ...  
...Herfindahl-Hirschman Index, the traditional measure of deposit concentration for antitrust review.  
The third issue, deposit reallocation, first came up in the merger of Fleet Financial Group and Shawmut National Corp. The...  
...Department may require before approving a merger, Mr. Neill said.  
The Department hopes to avoid splitting a loan and deposits of a single customer among several branches.  
"while the procedure may reduce concentration in markets...  
...reasoning that all of the competitors in a market would have to engage in similar deposit reallocation for the methodology to be consistently applied.  
He said the danger, in theory, is that...

**Federal Regulators Testify on Brokered Deposits Issue**

American Banker - October 28, 1983, Friday; Pg. 4

WORD COUNT: 4,285

**TEXT:**

... activities of some brokers are centered around providing large depositors with complete insurance coverage by dividing their deposits into units of \$100,000 placed in several institutions. Thus, the concern has shifted from...

...attention.

The federal banking agencies have already begun requiring that commercial banks disclose holdings of aggregate brokered deposits in their periodic call reports. This information will assist each agency in detecting trends in... or differentiate brokered funds from nonbrokered funds will be largely ineffective, because the incentive to split deposits into \$100,000 units would encourage the development of near-brokering services that would not...no longer be able to accept or roll over third-party brokered deposits if such deposits, when aggregated with all other brokered funds and custodial deposits, exceed 5% of all deposits, without advance...

AB- <NV> NOVELTY - A data generation unit generates a payment statement data by summarizing the payee company for each enterprise group, corresponding to received data including aggregate payment, former payment information and payee information. A payment unit pays the collective amount corresponding to each summarized payee group and a data transmission unit sends payment statement data to the payee groups (A,B).|

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) payment agent fund management program; and

(2) computer readable recorded medium storing payment agent fund management program.

USE - For fund management with respect to genus company of enterprise group.

ADVANTAGE - Remittance charge with respect to fund management is reduced effectively.

DESCRIPTION OF DRAWING(S) - The figure shows a flow diagram explaining the operation of the fund management system. (Drawing includes non-English language text).
